

DB Cargo BTT

Your partner for logistics solutions
in the mineral oil industry

Safe, flexible, industry-specific solutions

Our mineral oil transportation solutions connect large German and European refineries to approximately 100 tank farms and industrial locations across Europe. Irrespective of whether you want to solely use our transportation services or completely outsource your logistics needs to us, we will work with you and our partners to develop safe, flexible, customised solutions.

From transport to complete solutions

As a flexible rail logistics provider, we, at DB Cargo BTT, can tailor our services perfectly to your needs. We utilise the strengths associated with the strong backbone of the Europe-wide DB Cargo network while, at the same time, operating as a dangerous goods freight forwarder with a tailored provider network and customised additional services. Contact us to discuss finding the best logistics solution for you.

A strong network partner

We transport single freight wagons, block trains or even wagon-sets and, if desired, we coordinate loading and unloading slots directly with refineries and tank farms all across Europe. We offer to provide route monitoring services, regular updates on the latest status information, and active disruption management in the event of train delays. We achieve this by combining the network offerings of various different rail companies, thus optimising your transportation speed and reliability.

DBrailpipeline – our product for the mineral oil industry

DBrailpipeline, our product developed for the mineral oil industry, combines the industry's need for stability and flexibility with a high degree of reliability in logistics. We will convince you with reliable on-time service and ensure security of supply for you. We check resources and provide fast offers for your spot requests. The success factors of **DBrailpipeline** are:

- Agreed punctuality and order acceptance rates
- Dedicated, industry-specific service design and implementation logic
- DB Cargo's reliable, pan-Europe network complemented by select service providers
- Demand-based digitalisation of supply chain

Rail logistics provider with individual solutions

We are your one-stop shop for a whole host of services that include developing the best production concept for you, freight procurement, order fulfilment for loaded runs and empty runs using our modern IT solutions, and meeting your accounting needs. Thanks to customised interfaces for your software, our processes are closely intertwined with yours – you benefit from highly efficient processes and the latest technology (for example, geofencing).

We are also happy to integrate additional value-adding services, completely tailored to your needs, into your logistics chain. We are experts in:

- Plant logistics/plant shunting service
- Tank wagon management
- Analysing your existing fleet structure and advising you on appropriate tank wagons
- Damaged wagons management
- Customs clearance
- Tracking & tracing
- High water (flooding) and low water concepts

We will work closely with you to develop and combine the best service elements to meet your needs. Furthermore, we will analyse your logistics chain on an ongoing basis to assess its effectiveness.

The right equipment for your products

We have the right freight wagons to transport your sensitive products. Our diverse and modern fleet comprises mineral oil tank wagons for:

- Light-coloured products
- Dark-coloured products
- Temperature-controlled products
- Compressed gas products
- Various tank containers specifically for transporting mineral oil

We also have access to product-specific fleet pools.

Experts in safety

Competent, experienced employees and intelligent quality management help you take the worry out of transporting dangerous goods. Thanks to our professional transport management, we can also reliably and safely meet challenging international transportation requirements.

In addition, we regularly offer a hands-on workshop and training event entitled “Rail Safety Days” in which we discuss the correct handling of dangerous goods from the chemical and mineral oil industries. Specialist lectures by experts in their field provide information on the latest developments in safety and security. Furthermore, practical exercises increase awareness in relation to the safe handling of dangerous goods.
